

# Energy Policy

As an industrial solid tire and rubber related product manufacturing company, endeavor of Laugfs Corporation (Rubber) Limited is to reduce the consumption of specific energy and costs associated in order to promote sustainability in terms of environmental and economic aspects. We continue our operations with energy reduction strategies over the time. We are committed to adopt best practices, latest engineering knowhow while encouraging the employee commitment.

We keep our motivation towards continuous improvements in energy performance for all manufacturing processes and its related services. In order to achieve this, we shall purchase of energy efficient machinery, equipment and services, design for energy performance improvement, set and review energy objectives and make targets and capture all information related to energy consumption and provide necessary resources to meet the set objectives and targets.

Our operations shall comply with all applicable legal and other regulatory requirements regularly that relate to our energy use and efficiency and its monitoring. We are committed to make future expansions of the company by taking energy efficient aspects into account.

This energy policy will be reviewed annually and will be updated upon changes in the consumption pattern of energy in the manufacturing process that are affected due to capacity changes.

We will communicate the policy to personnel at all levels internally and externally and ensure that its contents are understood and that all are committed towards achieving its set goals.

The energy policy shall be communicated, understood and applied within the LCRL and shall be available to relevant interested parties as appropriate.
